

# COVID-19 and Cancer – an IARC proposal

International Agency for Research on Cancer  
Lyon, France

# Predicted 1-year colorectal cancer survival: delays in cancer diagnosis

- Over 3.3 million deaths from Covid-19
- Patients with cancer directly and indirectly impacted
- Poorer outcomes among cancer patients

>13,000 colorectal cancer deaths predicted from delays in diagnosis only in one year

# COVID-19 and Cancer Taskforce

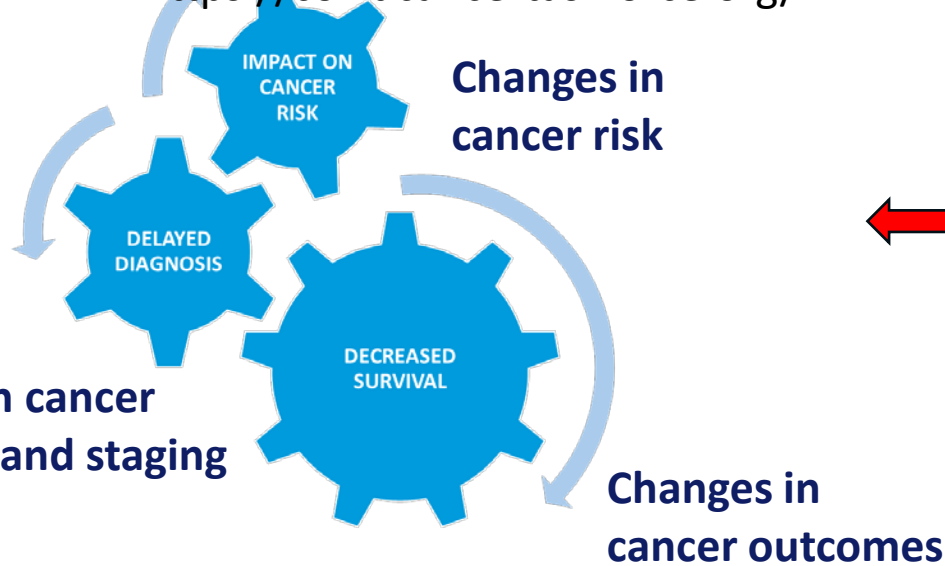

Address risks for longer-term impacts on cancer outcomes, inequalities, research

COVID-19 and Cancer Global Modelling Consortium

# IARC's COVID-19 and Cancer Initiative (IARC-C19): *a building back better* proposal

To inform IARC's Participating States on mitigation and recovery strategies, IARC-C19 aims to provide over a four-year timeframe:

- A global platform to monitor **national policies** in the wake of the pandemic and their impact **on cancer services and cancer outcomes**
- The evidence needed to **support decision-making in cancer control**, both during and after the pandemic

The key objectives of IARC-C19 are to:

1. strengthen data collection systems to improve the understanding of the linkages between policies and outcomes in the COVID-19 era, especially those related to cancer
2. improve the health system resilience of IARC PS and provide guidance in building back better
3. ensure knowledge dissemination and transfer for greater buy-in from various national stakeholders

International Agency for Research on Cancer

**IARC PS engagement**  
**Real-time data – Strategy to build back better**  
**Expertise transfer – Capacity building**
